PROJECT REPORT OF CO-OP Project at Industry (Module-2)

On

REELBITE:CINEMATIC CRAVINGS

Submitted in partial fulfillment of the requirement
for the award of degree of
BACHELOR OF ENGINEERING
In
COMPUTER SCIENCE AND ENGINEERING

Submitted by:

Pranav Gupta
2210990666

Supervised By:

Dr. Rajat Takkar
Assistant Professor

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING
CHITKARA UNIVERSITY INSTITUTE OF ENGINEERING AND TECHNOLOGY

CHITKARA UNIVERSITY, PUNJAB, INDIA

CERTIFICATE

This is to be certified that the project entitled **“REELBITE:CINEMATIC CRAVINGS”** has been submitted for partial fulfilment of requirement for the award of the degree of Bachelor of Engineering (ComputerScience and Engineering) submitted in the department of Computer Science and Engineering at Chitkara University Institute of Engineering and Technology, Chitkara University, Punjab, India is a bonafide piece of project work carried out by Pranav Gupta 2210990666 towards the partial fulfillment for the award of the course COOP-2 Project (22CS411)under the guidance of “**Dr. Rajat Takkar**”.

Name of Project Guide:

Dr. Rajat Takkar

Assistant Professor

DECLARATION

I hereby certify that the work which is being presented in the project report entitled “Reelbite: Cinematic Cravings” in partial fulfilment of requirement for the award of the degree of Bachelor of Engineering (ComputerScience and Engineering) submitted in the department of Computer Science and Engineering at Chitkara University Institute of Engineering and Technology, Chitkara University, Punjab, India, is an authentic record of my own work carried out under the supervision of Dr. Rajat Takkar. The matterpresented in this project report has not been submitted in any other university/institute for the award of any degree.

Place: Rajpura Pranav Gupta

Date:10 May 2026 2210990666

This is to certify that the above statement made by the candidate is correct to the best of my knowledge and belief.

Dr. Rajat Takkar

Assistant Professor

Department of Computer Science and Engineering

Chitkara University Institute of Engineering and Technology,

Chitkara University, Punjab, India

ACKNOWLEDGEMENT

- It is our pleasure to be indebted to various people, who directly or indirectly contributed in the development of this work and who influenced my thinking, behaviour and acts during the course of study.
- I express our sincere gratitude to all for providing me an opportunity to undergo Integrated Project as the part of the curriculum.
- I also extend our sincere appreciation to "**Dr. Rajat Takkar**" who provided his valuable suggestions and precious time in accomplishing our integrated project report.
- Lastly, I would like to thank the almighty and our parents for their moral support and friends with whom we shared our day-to day experience and received lots of suggestions that improve our quality of work.

Thanking you

Pranav Gupta

1.Abstract

ReelBite: Cinematic Cravings is a web-based application designed to integrate online movie ticket booking with food and beverage ordering into a single, user-friendly digital platform. The system aims to enhance the cinema-going experience by allowing users to browse movies, select showtimes and seats, and pre-order meals seamlessly before arriving at the theatre. This reduces waiting time, improves operational efficiency, and increases customer satisfaction.

For payment processing, the platform integrates PayPal as a secure and trusted online payment gateway, enabling smooth and safe transaction handling. Once a payment is completed, the system automatically updates booking records, food orders, and generates digital tickets for users. Administrators are provided with a dedicated dashboard to manage movies, show schedules, pricing, and orders efficiently. This project demonstrates the practical application of modern web technologies in solving real-world problems within the entertainment and food service domain.

2. Introduction of Reelbite:Cinematic Cravings

2.1 Background

The cinema industry has always relied on efficient management practices to ensure smooth operations and high customer satisfaction. Traditionally, cinema operations involved many manual processes, such as browsing movie schedules, booking tickets, managing seat availability, and handling food orders. These tasks were often performed using basic methods or outdated systems, which could be error-prone, time-consuming, and challenging to scale as demand increased.

With the rapid advancement of technology, there was a growing need for a more integrated and automated approach to managing cinema operations. This led to the development of platforms like **"ReelBite: Cinematic Cravings"**, designed to handle various aspects of the cinema experience in a more organized and efficient way. Reelbite combines multiple functionalities such as movie browsing, ticket reservations, seat selection, and food pre-ordering into a single platform, simplifying the process for both users and cinema staff.

The evolution of such platforms has been driven by the increasing demand for better customer experiences, the need for real-time access to information, and the desire to reduce operational inefficiencies. As a result, **"ReelBite: Cinematic Cravings"** has become an essential tool in the cinema industry, helping theaters enhance efficiency, elevate the movie-going experience, and remain competitive in a fast-paced entertainment market.

2.2 Problem Statement

"In today's fast-paced world, movie enthusiasts often find it challenging to seamlessly book both their movie tickets and ordering snacks for an enjoyable cinema experience. Traditional booking platforms may lack integration or convenience, resulting to fragmented user experiences.

Additionally, these traditional sites often struggle with user engagement and retention due to a lack of innovative features. Leading to high bounce rates and low conversion rates, ultimately impacting revenue.

ReelBite: Cinematic Cravings aims to address these issues by providing a unified platform for movie ticket booking and food ordering. Our goal is to offer an intuitive interface and seamless integration, allowing users to effortlessly browse movie listings, select showtimes, reserve tickets, and preorder their favorite snacks.

Furthermore, existing movie websites often lack visual appeal user-friendliness, making it difficult for users to navigate and access the information they need. To tackle this challenge, our project proposes implementing an Exit Intent feature on our site using HTML, CSS, JavaScript, React JS.

This feature will detect when a user is about to leave the site and trigger a pop-up message with an enticing offer or call-to-action, encouraging users to prolong their stay longer and engage with the content.

Develop an e-commerce platform, "ReelBite: Cinematic Cravings" catering to movie aficionados and food enthusiasts. The platform will integrate movie reviews, ticket booking, and food ordering services using ReactJs and MongoDB for database with api’s will be built in expressJs.

3. Software and Hardware Requirement Specification

1. S/W Requirements

1. Operating System:

- Windows 10 or higher, macOS, or Linux.

2. Frontend:

- **React.js:** A JavaScript library for building user interfaces.
- **Tailwind CSS:** For structuring and styling the user interface.
- **JavaScript (ES6+):** The programming language for handling client-side logic.

3. Backend:

- **NodeJs:** A JavaScript runtime environment that enables server-side scripting.
- **ExpressJs:** A web framework for building REST APIs and handling server logic.
- **MongoDB:** A NoSQL database for storing user data, chat history, and media..

4. Authentication:

- **JWT (JSON Web Tokens):** For token-based user authentication.
- **bcrypt:** For password hashing and validation.

5. **Additional Tools and Libraries:**
   - **Multer**: For handling file uploads, such as profile pictures or ticket attachments.
   - **Cloudinary**: For storing and managing uploaded media files.
   - **Nodemailer**: For sending emails, such as booking confirmations and promotional offers.

6. **Development Tools:**
   - Visual Studio Code (VS Code): A source code editor with support for various extensions for JavaScript, React, Node.js, etc.
   - Thunder Client: For testing API endpoints.

7. **Version Control & Collaboration:**
   - Git: For version control and managing source code.
   - GitHub: For collaboration and repository hosting.

8. **Package Managers:**
   - npm (Node Package Manager): To manage project dependencies and install required libraries.
   - MongoDB Compass: For database management and query visualization.

1. H/W Requirements

- Processor: Intel Core i3 or higher, or equivalent AMD processor.
- RAM: 4 GB minimum (8 GB recommended for smooth performance).
- Hard Disk: At least 20 GB of free storage space for project files, Node.js, MongoDB, and development tools.
- Network: A high-speed internet connection for downloading libraries, real-time communication, and collaboration.

Key Features

The web-based Movie & Food booking site key feature developed in this project has several key features that make it efficient and user-friendly. These key features include:

1. **Book Tickets:** Seamlessly browse movies, view showtimes, select seats, and complete ticket purchases in a user-friendly manner.

2. **Food Booking Site:** Pre-order snacks, beverages, and meals to enjoy during the movie, enhancing the overall cinema experience.

3. **Exit Plugin with Offers and Ads:** Engage users with targeted promotions and advertisements upon exiting the website, maximizing revenue opportunities.

4. **Add Reviews:** Share feedback and opinions on movies and the booking process, fostering community interaction and informed decision-making.

5. **Add Ratings:** Rate movies based on personal preferences, providing valuable insights for other users and influencing movie selections.

6. **Add to Cart:** Compile ticket and food selections for convenient and error-free booking before finalizing purchases.

7. **Login/Signup Page:** Enable secure account access and registration for personalized experiences.

8. **Payment Gateway:** Enable secure transactions for seamless booking experiences.

9. **Admin Panel:** An admin panel to operate all orders and new and old products.

6. Project Advantages

Here are some advantages of a movie & Food booking site using HTML, CSS, and JavaScript over others:

Accessible to a wider audience: A movie review site is accessible to anyone with an internet connection, allowing a wider audience to read reviews and engage with the content.

Review and book tickets: This site not only allow users to review different movies and food as well as provide option to book tickets and purchase food.

Easy to navigate: The site can be designed to be easy to navigate, with clear categories and search functionality for users to find the reviews they are looking for.

Time-saving: Users can quickly access movie reviews and ratings, saving them time in.

Real-time updates: The site can provide real-time updates on movie releases, ratings, reviews and real-time prices for food items and keeping users up-to-date on the latest information.

Cost-effective: Compared to traditional print media, a movie and food site is more cost-effective to produce and distribute.
their decision-making process.

Food Ordering: Users can conveniently buy food items through the platform, enhancing their movie-watching experience.

Future Scope:

Personalized Recommendations: Implement a feature to suggest movies and food items based on user preferences, reviews, or past orders.

Real-Time Notifications: Notify users about new movie releases, special offers, or flash sales.

Offline Access for Tickets: Allow users to download movie tickets and food orders as QR codes or PDFs for offline use.

Conclusion

Implementing **"REELBITE-CINEMATIC CRAVING"** using modern tools and technologies significantly enhances the movie-going experience for users while optimizing cinema operations. With a well-structured frontend powered by ReactJs and Tailwind CSS, the platform delivers a seamless and user-friendly interface for browsing movies, booking tickets, and pre-ordering food. The backend, built with NodeJs and ExpressJs, ensures robust data handling and efficient business logic execution.

By leveraging MongoDB for scalable data management and integrating tools like Multer, Cloudinary, and Nodemailer for advanced functionalities, Reelbite provides a comprehensive solution. This platform not only simplifies the process for users but also helps cinemas streamline operations, reduce errors, and boost customer satisfaction. **"REELBITE-CINEMATIC CRAVING"** is a valuable innovation, redefining how people experience entertainment in the modern era.
